Continuation of 11. does NOT place the application in condition for allowance because: the Examiner has relied in the teachings of Kellenberger to provide motivation to have a pore size in the layer of fine fibers that is smaller to that of the absorbent particles of the absorbent layer (i.e. to minimize the effects of gel-blocking); it is further noted that such modification would have been obvious in order to contain the absorbent particles withing the absorbent structure are and to prevent that these reach the top layer (liquid pervious layer). The Examiner is not bodily incorporating the structure of Kellenberger et al. in the THOMAS structure as implied by Applicant's response
